01 / REVIEW FRAMEWORK

One platform. Multiple brands. One approved commercial agreement.

APGI Training Platform | Version 2 review framework

Branding, course rights, commissions, cost recovery and approvals

Prepared for: Johan Ras and Jorrie Jordaan
Document: APGI-POL-V2-001 | Draft 0.1 | 15 October 2026
Status: FOR REVIEW - NOT APPROVED OR ACTIVE

Purpose

Agree the operating rules and the money calculations before building them into V2. This document records the requested defaults, distinguishes recommendations from agreed instructions, and provides a decision and sign-off schedule.

Requested default	Proposed treatment
APGI remains the host	Partner-branded experiences use the same APGI platform; no separate seat or hosting tariff for now.
Partner-owned course sold through APGI	10% to the originating commercial rights holder; 90% remains in the APGI course pool, before agreed deductions.
APGI-owned course sold through a partner	APGI retains 50%; the partner receives the other 50%, on the approved calculation basis.
External operating costs	Approved costs allocated to the APGI business account, plus 6% of eligible cost only.
APGI distributable course share	50% Johan Ras / 50% Jorrie Jordaan by default; changes require both approvals.

Read this correctly: User-requested defaults are recorded requirements, not evidence of an executed commercial contract. Items labelled Proposed need approval. No person has signed this document; Codex has not signed on anyone's behalf. No application settings, access rights, policies, charges or payouts are activated by this PDF.

Review route: current gaps (2) | branding model (3) | owner permissions (4) | commercial rules (5) | costs (6) | calculations (7-8) | approvals (9) | email design (10) | certificates (11) | additional variables (12) | delivery plan (13) | decision and sign-off schedule (14-15).

02 / REVIEW FRAMEWORK

Why the current branding screen falls short

Source review of the V2 checkout at commit 3eefd304728324a63789eb7d0a72426563bc6d0f. This is an implementation review, not a new live-database audit.

Area	What exists in V2	What must be added
Brand creation	The organisation form selects a saved preset. The separate Branding page saves a reusable preset while applying it to a selected course.	Create and maintain an organisation brand independently of a course, with an obvious create/edit/preview workflow.
Brand updates	Organisation creation copies preset colours/logo. Course branding is keyed by course.	A controlled organisation brand version, not a copy that silently falls out of sync or overwrites another company.
Course assignment	Public/client-specific visibility and selected organisation availability exist.	An explicit course-to-organisation offering for every selling brand, including APGI, with independent commercial terms.
Learner context	The interface describes a permanent organisation/referral relationship from the first invitation.	Separate learner membership, invitation source, purchased offering and active branded workspace.
Certificates	Ten templates and organisation branding at issuance exist; owner/admin download and certificate authentication exist.	Company-owner template access, approved immutable brand assets and coherent offering/enrolment branding.
Commercial governance	Course prices, recipients and referral fields exist as separate features.	Course rights, development recovery, shared-cost allocation, two-person approval, policy register and reconciled statements.
Email	V2 invitation/confirmation/recovery delivery is enabled using a separate sender credential.	Organisation-branded templates, course artwork, owner onboarding and scoped approval notifications.

Immediate explanation

The Saved branding dropdown does not create a new brand. If only the APGI fallback appears, the form has no client preset to offer, or its preset read failed. The current service returns an empty list on a read failure, so those conditions must be shown separately in the redesigned screen. The full company workflow you expect has not yet been implemented.

We should replace this fragmented setup with one company workspace. Saving a brand must not apply it globally to a course that several organisations use. Existing learner access and certificate eligibility must be preserved.

03 / REVIEW FRAMEWORK

The company and course model

Requested: each learner should work under the enrolled organisation's identity, while APGI remains the hosting platform.

Keep these separate	Meaning
Course and content version	The learning material and assessment rules. One master course can support several organisation offerings.
Legal IP owner / licensed rights	Who owns or can license the material. APGI developing a course does not, by itself, prove ownership; record the signed agreement.
Commercial beneficiary	The organisation entitled to the agreed royalty or revenue share. Initial assignment alone must not silently establish legal ownership.
Selling organisation / offering	The portal or approved invitation/order through which this enrolment is supplied. APGI and NKS may both offer the same course.
Learner membership and enrolment	A person can belong to more than one organisation. Each enrolment keeps its offering, brand, course version and agreement version.
Host and financial operator	APGI operates the master platform. Merchant-of-record, contracting entity and bank payees must be expressly confirmed before payment launch.

Proposed learner journey

Branded invitation or offering link > matching verified account > Profile > organisation dashboard > assigned course > organisation-branded certificate when eligible. Branding continues through navigation, course cards, support details and transactional emails. A small Hosted by APGI attribution remains.

The invitation/order stores the organisation and offering on the server. A learner cannot change the commission or gain access by editing a URL, selecting a logo or reusing another company's invitation. A learner with multiple memberships uses a visible workspace switch; switching does not transfer enrolments or rewrite paid transactions.

Brand precedence and content limits

Proposed precedence: authorised workspace + enrolled offering, then that organisation's published brand version, then the APGI default only for APGI enrolments. Do not flash APGI branding while a partner workspace loads. If required branding cannot load, show a neutral loading/error state rather than another company's identity.

The branded shell cannot automatically remove logos baked into PowerPoint/SCORM packages, videos, PDFs or the native Scannex Viewer. Those assets need an authorised neutral/partner export and separate QA. Preserve mandatory attribution, third-party notices and accreditation statements. V3 can add custom page layouts or custom domains.

04 / REVIEW FRAMEWORK

Company-owner permissions

Create a scoped Business owner role. It is distinct from Learner and full APGI administrator, and is limited to the appointed organisation.

Capability	Business owner	APGI administrators
Company identity	Edit own logo, colours, display name and support details; preview and publish within approved brand rules.	Create/suspend organisations and appoint or revoke owners.
Certificate choice	Select an approved template for own organisation; preview with company branding.	Maintain templates, mandatory APGI reference and eligibility rules.
Policies and agreements	View and approve/reject versions explicitly assigned to their organisation.	Manage the platform register and required approvers.
Learners and progress	Proposed: view own organisation's enrolment/progress summaries only. Detailed learner export or invitation authority is separately granted.	Manage authorised platform-wide learner operations.
Revenue and costs	View own organisation statements and commercial schedules. Cannot alter rates, bank payees or cost approvals.	Propose configurations; financial activation still requires the designated approvals.
Course/platform changes	Submit and track change requests. No editing of learning content, quiz rules, prices, pass marks or course ownership.	Review and implement approved changes.
Security and other companies	No APGI settings, platform admin grants, other organisations' records, internal personal splits or provider credentials.	Manage security under the platform access controls.

Owner invitation and lifecycle

An APGI administrator captures the legal company name, named owner and verified email, then submits the company setup. After validation and the required setup approval, the system automatically emails the owner a company-branded onboarding link. The matching verified account receives a membership for that company only, then completes Profile and reviews its brand, courses, certificate and applicable policies.

Proposed: permit one primary owner and an optional approved deputy. Ownership transfer or deputy appointment is an APGI administrator action, with audit and removal of obsolete access. Require stronger authentication for financial approvals and owner-role changes. API, page, file and database rules must all enforce the organisation boundary; hiding menu items is insufficient. [S4]

05 / REVIEW FRAMEWORK

Commercial rules and adjustable defaults

All shares require a documented course/organisation agreement with a defined calculation base, effective date, currency and named beneficiaries.

Scenario	Requested default	Required configuration
NKS-owned course offered by APGI	NKS 10%; APGI course pool 90%.	Commercial owner, approved licence, seller APGI, royalty duration and calculation base.
APGI-owned course offered by NKS	APGI course pool 50%; NKS 50%.	APGI ownership/licence evidence, seller NKS, distribution rights and course offering.
Same owner and seller	Proposed: owner receives the residual course pool after agreed costs/recovery.	No automatic second royalty to the same organisation; APGI hosting alone creates no new seat tariff.
Third-party owner / multiple marketers	No unagreed default.	An explicit allocation whose shares total 100%, with no accidental stacking of royalties and referral commissions.
APGI internal distribution	Johan Ras 50%; Jorrie Jordaan 50% of APGI's distributable course share.	Both must approve any change. Organisation ownership, admin authority and personal earnings are different records.

What the percentages mean

Requested: the 10%, 50% and internal 50/50 defaults are adjustable by agreement. Proposed: apply them to the net distributable course pool defined on page 7, after approved operating deductions and development recovery. This preserves the 10/90 or 50/50 relationship within the available pool. It is not the same as guaranteeing 10% or 50% of the full listed fee.

Decision required: full fee or net pool?

The user's phrase course value could mean the full tax-exclusive fee. Under that alternative, a USD 300 NKS-owned sale guarantees USD 30 to NKS before operating deductions; APGI then bears those deductions from its USD 270. The recommended net-pool method instead shares the remaining pool. Johan and Jorrie must choose and record the base; the system must never silently switch between them.

Proposed: seller attribution comes from the approved offering and order, not a browser referrer or the learner's first-ever invitation. No lifetime referral commission is implied. A free/manual enrolment creates access but no payable commission until cleared revenue is recorded. A corporate invoice is allocated across its learners without generating duplicate revenue per enrolment.

06 / REVIEW FRAMEWORK

Operating costs and the 6% charge

Requested: record hosting, Supabase, applicable Scannex AWS costs, Stripe-related costs and other approved services; allocate them to the APGI business account.

Cost category	Proposed allocation method	Control
Hosting, database, email, storage	Period-based shared allocation across active offerings using an agreed usage or revenue basis.	One invoice total; allocations across companies/courses cannot exceed 100%.
Scannex AWS streaming	Measured usage attributable to Scannex sessions/offerings; allocate agreed idle capacity separately.	Do not charge unrelated courses. Record forecast, actual usage and budget alerts.
Payment, payout and FX fees	Actual payment/order cost, using the configured provider and country terms.	Identify whether the processor has already deducted the fee. Count it once.
Stripe setup / other one-off work	Approved supplier invoice or separately approved development/setup item.	Do not treat setup labour and provider transaction fees as the same cost.
Credits, refundable tax, discounts	Net down the recoverable cost as agreed.	No markup on a refunded or recoverable amount; no duplicate recovery.

Cost-only calculation

Let C be approved eligible cost after credits and agreed recoverable taxes. The requested administration charge is A = C x 6%. The APGI business account receives C + A as reimbursement plus administration income. Example: eligible cost USD 20.00 gives administration USD 1.20 and business allocation USD 21.20. It does not add 6% to a USD 300 course fee, and it does not compound on the 6% charge itself.

Proposed eligibility: the 6% applies to approved net third-party service costs. Set an explicit eligible/not-eligible switch for processing fees, internal labour and other categories. Taxes collected for authorities, development principal, partner royalties, refunds and personal distributions are not eligible by default. This eligibility choice needs agreement.

Every cost entry needs supplier, evidence, period, currency, amount, allocation method, recipient APGI business account, markup eligibility, budget/cap, approvers and effective date. Costs remain pending until the required approval is complete. Estimates must reconcile to actual invoices; a variance or new allocation requires a revised approval, not an invisible deduction.

No separate hosting subscription or seat price is introduced for partner companies. Recovering approved operating costs from course proceeds is distinct from charging a new hosting tariff. The earlier Scannex 10% estimate tolerance is a budget buffer, not earned revenue or an additional 6% markup base; reconcile it to actual approved spend. Confirm whether APG business account means the APGI legal entity/account.

07 / REVIEW FRAMEWORK

A transparent revenue calculation

Proposed order for approval. All examples use USD, exclude tax and discounts, and use hypothetical costs rather than provider price quotations.

Step	Calculation and destination
1. Cleared course receipts	Start with money actually received after discounts, refunds and taxes collected for authorities. Retain a separate gross/tax/refund record.
2. Operating allocation	Deduct approved cost C, cost-only administration A, and any other approved actual processor/FX fees F. If F is included in C, do not deduct it again.
3. Available course pool	N = receipts - C - A - F. Negative/insufficient funds are an exception; never invent a negative partner payout or silently bill a learner.
4. Development recovery	R = smaller of outstanding approved development balance and recovery rate x N. Use only a non-negative available pool.
5. Ordinary sharing	P = N - R. Apply the approved owner/seller split to P. R is recorded separately as development reimbursement.
6. APGI internal sharing	Split APGI's ordinary distributable share 50/50 between Johan and Jorrie, unless an approved alternative applies. Reimbursements, development principal, tax and reserves are not personal income by default.

Example A: NKS course sold through APGI, no costs

Cleared tax-exclusive fee: USD 300.00. NKS receives 10% = 30.00. APGI's 90% ordinary course pool is 270.00, distributed Johan 135.00 / Jorrie 135.00. Total: 30.00 + 135.00 + 135.00 = 300.00.

Example B: APGI course sold through NKS, with costs

Receipts USD 300.00; eligible service cost C = 20.00; administration A = 1.20; actual processor cost F = 8.80 (not marked up in this example). N = 270.00, with no development recovery. NKS receives 135.00; APGI's ordinary share is 135.00, split Johan 67.50 / Jorrie 67.50. APGI business reimbursement/administration is 21.20; processor cost is 8.80. Total allocation: 135.00 + 67.50 + 67.50 + 21.20 + 8.80 = 300.00.

Amounts are rounded once in minor currency units under an agreed residual-cent rule; retain the exact approved rates. Publish a transaction statement showing every line. A payout reserve delays payment of an earned allocation; it must not be counted a second time as a cost or permanently change the agreed shares.

08 / REVIEW FRAMEWORK

Recover development costs exactly once

Requested: capture unpaid development costs when a course is imported and assigned; retain an agreed amount until recovery, then use the ongoing allocation.

Proposed recovery agreement

Record the approved development budget, evidence, amount already paid, credits, funder/payee, recoverable balance, recovery rate, covered offerings, effective dates and ongoing share. A paid development fee reduces the balance immediately. Unapproved overruns and future maintenance do not automatically increase the recoverable amount.

Recommended model: reserve a configurable percentage of N as development recovery before sharing the residual P. Recovery is separate from APGI's ordinary course earnings and is paid to the recorded development funder, defaulting to the APGI business account when APGI funded the work. A contract may instead specify different complete pre-/post-recovery splits; that is a distinct option and must define which part reduces principal.

Illustrative recovery agreement	Value
Receipts / operating deductions	300.00 / 30.00
N after operating deductions	270.00
Normal APGI / NKS sharing of P	50% / 50%
Configured development recovery rate	25% of N
Outstanding development balance before this sale	40.00

Example C: the sale that completes repayment

Nominal recovery is 25% x 270.00 = 67.50. The remaining development balance is only 40.00, so R is capped at 40.00. The residual P is 230.00. APGI's ordinary share is 115.00 and NKS receives 115.00. APGI development reimbursement is 40.00. Johan receives 57.50 and Jorrie 57.50 from the ordinary APGI share. The ending recovery balance is zero.

Reconciliation: operating 30.00 + recovery 40.00 + NKS 115.00 + Johan 57.50 + Jorrie 57.50 = 300.00. The recovery principal is not split again as personal earnings. No excess 27.50 is withheld on the payoff sale.

Example D: the next sale

With the same receipts and operating costs but a zero balance, R = 0 and P = 270.00. APGI and NKS each receive 135.00; Johan and Jorrie each receive 67.50 from APGI's ordinary share. No manual switch is needed if the approved agreement already specifies the post-recovery terms.

Use one atomic recovery ledger across all authorised selling brands; simultaneous sales must not over-recover. Refunds reverse the original allocation and restore any refundable recovered principal under the approved policy. Upgrades create a separately approved cost addition. The ordinary APGI share must not also be counted as development recovery unless the agreement explicitly adopts that alternative.

09 / REVIEW FRAMEWORK

Policies, approvals and change control

Requested: automatic emails to Johan and Jorrie when cost/distribution configurations are submitted; both approve, or the proposal returns for reconfiguration. Company owners join where their agreement is affected.

State	Required behaviour
Draft	Editable proposal with comparison to current terms, sample calculations, supporting invoices and an immutable document version when submitted.
Submitted / awaiting decisions	Email and in-app notice to both named APGI approvers and any affected contractual company owner. Review link requires the correct signed-in account.
Rejected	Reason is required. No activation; proposer revises and resubmits a new version. Approvals of the rejected/replaced version do not carry forward.
Approved / scheduled	All required distinct people explicitly approve the same version and financial snapshot. Set a future effective date and run activation checks.
Active	Only the approved version affects new transactions. Existing approved terms remain active while a change is pending; no silent interruption to enrolled learners.
Superseded / withdrawn	Retain the document, approval receipt, effective period and affected transaction references. Never overwrite or erase financial history.

Platform policies register

Add Administration > Platform policies: platform policies, organisation agreements, course commercial schedules, cost allocations and approval history. Search by company, course, policy type, version and status. The approved review PDF and its agreement schedules become controlled records after the required people sign off; a draft must never be presented as active policy.

For each submission retain the exact PDF and configuration hash, version, proposer, named approver IDs, authority/scope, timestamp, decision and reason. Preserve the original approved file plus a separate approval receipt; adding signatures/stamps must not invalidate the evidence of what was approved. An emailed link alone is not approval. GET requests and email security scanners must never approve or reject anything.

Separation of financial authority

Both Johan Ras and Jorrie Jordaan must approve APGI cost/distribution rules and any internal-share change. The proposer may give one explicit approval but cannot count twice or approve as the other person. A company owner approves their own contractual rates/cost obligations only, not unrelated companies or APGI's personal split. Route internal split details in a restricted annex. Additional platform administrators do not automatically become financial signatories.

Proposed: no response means pending, not acceptance. Reminders and escalation intervals are configurable. Appointing a replacement financial signatory requires its own controlled approval; do not create an emergency bypass for a missing signatory.

10 / REVIEW FRAMEWORK

Branded email and company onboarding

Design direction: retain a verified APGI sending domain while presenting the inviting organisation's approved identity and course artwork. Illustration below is a concept, not a sent message.

NKS CAPITAL / ILLUSTRATIVE BRAND

Your Scannex learning starts here

Scannex Training Programme

Practise systematic image viewing through eight learning units and an approved summative assessment.

Open your course invitation

Use the invited email. Create or sign in to your account, verify your email and complete Profile to open your organisation dashboard.

Invitation expiry, inviter and company support details. Hosted by APGI.

Configure logo/colours, display sender, verified Reply-To, course artwork/title/summary, inviter, expiry, button and support details. Use distinct course-invitation, owner-onboarding, financial-approval and policy templates. The owner welcome opens My company setup for company-only branding, certificate and policy review; it never grants full APGI admin rights.

Send one deduplicated welcome on company publication. Retain a verified sending domain, APGI host attribution and V2 test label; never impersonate an unverified sender. Keep private details out of subjects and tokens out of images/tracking links. Test mobile, image-blocked and plain-text versions; record delivery/bounces and controlled resends.

11 / REVIEW FRAMEWORK

Certificates and a coherent branded experience

Requested: the company selects a certificate design that inherits its branding. APGI remains the host and the certificate authentication service.

Certificate rules

• Retain the ten approved template choices. The company owner may select their company's template and preview a clearly labelled sample; they cannot edit pass marks or issue an unearned qualification.

• Use the organisation attached to the enrolment/offering, not whichever portal the learner happens to open later. Capture the learner certificate name, course/version, organisation name, selected template, logo and colours at issue time.

• Keep a small Hosted by APGI reference at the bottom right. Maintain a unique certificate number, authentication record and verification/QR address. Public verification exposes only necessary certificate identity and validity.

• Preserve existing eligibility gates: learning completion and the applicable approved assessments. Scannex practice alone cannot authorise certification or replace the supervised practical assessment.

• Freeze the exact logo asset as well as its reference. Replacing a company logo must not change an already-issued certificate. A correction/reissue must retain an explicit link to the original number and audit trail; revocation remains controlled.

Branding acceptance checklist

Surface	Required result
Invitation and first sign-in	Correct company identity, verified-mailbox flow and company-specific destination; no other-company data.
Profile and dashboard	Company workspace retained; enrolled courses and next actions immediately visible after Profile.
Course and interactions	Consistent wrapper, course cards, support and footer. Audit embedded media, SCORM, PDFs and Scannex streaming separately.
Certificate and verification	Company template/brand at issue; APGI reference visible; eligibility, owner-only downloads and authentication unchanged.
Multi-company account	Workspace switch shows only authorised memberships and enrolments; one brand's changes do not alter another's offering.

V2 delivers approved logo, palette, course offering and certificate configuration. V3 can introduce bespoke layouts, page composition and additional portal/domain options. Company owners can submit requests now, with a visible status and an APGI response, rather than directly changing platform or course structure.

12 / REVIEW FRAMEWORK

Variables that should not be overlooked

These are decisions to record, not extra charges or permissions introduced by this draft.

Variable	Recommended agreement/control
Ownership and duration	Legal IP/licence evidence; commercial beneficiary; renewal, exclusivity, termination and whether a royalty continues indefinitely.
Price and attribution	Tax-inclusive/exclusive prices, discounts, bundles, group orders, repeat sales, free seats, manual receipts and attribution when several brands market a course.
Tax and contracting entity	Who invoices the learner, is merchant of record and accounts for sales taxes/withholding. Obtain the applicable accounting/tax determination before enabling money movement.
Currency and country	Settlement and ledger currency, FX source/date, conversion fees, recipient bank country and permitted payout route. Do not assume every international Stripe transfer is supported. [S2]
Refunds and disputes	Partial/full refunds, chargebacks, non-refundable provider fees, recovery-balance restoration and clawback of previous distributions. Refunds and transfers need separate reconciliation. [S1, S3]
Cost fairness	Approved category, payer, markup eligibility, shared-cost basis, idle AWS cost, caps, evidence, overage alerts and invoice-period true-up. No duplicate expense across companies.
Payout timing	Cleared funds, reserve/hold period, minimum payout, monthly cut-off, payout failure and negative-balance treatment. Commission accrual is distinct from bank transfer.
Company exit / owner change	Learner completion access, certificate verification retention, unresolved claims, remaining development debt and authorised successor ownership.
Privacy and retention	Company access to its own learners only; controlled exports, retention periods, backup/restore and deletion obligations without deleting financial audit evidence.
Maintenance and capital	Separate initial development, future revisions, operating service costs and profit. Define what happens if APGI never fully recovers the agreed development balance.

Stripe route selection remains an implementation decision after the merchant and recipient countries are confirmed. Separate charges/transfers can support multiple recipients, but availability, refund handling, balance responsibility and payout fees vary with the chosen configuration. No provider fees are quoted or assumed by this agreement. [S1, S2]

Proposed early operating mode: approved statements and manually authorised settlements before automated bank transfers. A configured percentage is neither proof of cleared payment nor authority to release funds. Company administrators should see their statement; Johan and Jorrie should see the platform reconciliation and outstanding recovery/cost balances.

13 / REVIEW FRAMEWORK

Implementation sequence and acceptance gates

Recommended: implement in V2 in small reviewable stages after this framework is approved. Keep real V1 learners on the existing release until a separately authorised migration.

Stage	Deliverable	Acceptance gate
1. Agree the rules	Resolve pages 14-15; approve the commercial schedule and policy version. Confirm signatories, legal entities and payees.	No unresolved calculation base, cost rule or authority decision.
2. Company workspace	Brand creation independent of course; company owners; course offerings; certificate selection; change requests and branded invites.	A company owner cannot read/change APGI settings or another company. The same course works under two brands.
3. Policy and approval register	PDF versions, organisation scopes, approve/reject workflow, emails, in-app tasks and immutable receipts.	One rejection prevents activation; edits invalidate prior approvals; email-link scanning cannot approve.
4. Financial simulation	Cost register, 6% calculations, owner/seller shares, recovery ledger and internal APGI split in test mode.	Every example reconciles to receipts; simultaneous payoff, refunds, duplicate events and shared costs tested.
5. Payment integration	Approved merchant/recipient onboarding, provider sandbox, reconciliation and controlled payouts.	Countries/routes supported, fees recorded once, failed/refunded transactions reconcile and signatories approve activation.
6. Release review	User journey, accessibility, branded assets/email and regression QA; backup, mapping and rollback plan.	Johan and Jorrie approve a specific release. Existing enrolments, progress and certificates are preserved.

Proposed administration navigation

Companies (identity, owners, branding, course offerings, certificate, requests)
Courses (content versions, rights holder, development agreement)
Commercial agreements (costs, rates, recovery, allocations, statements)
Platform policies (documents, versions, scoped access and approvals)
Email templates (brand preview, course cards, test delivery and history)

Before any live migration, inspect the current permanent-organisation/referral records and create an explicit mapping to memberships/offerings. Do not reattribute earlier sales, replace a live learner's brand or rewrite historic percentages just because the V2 model changes. Payments and Scannex streaming remain disabled in staging until separately enabled within the approved scope.

14 / REVIEW FRAMEWORK

Decision schedule for Johan and Jorrie

Complete this schedule together. A requested default may be accepted unchanged, but the full policy remains a review draft until the required approvals are recorded.

ID	Decision to record	Draft recommendation / entry
D1	Calculation base for 10% / 50%	Net distributable pool after approved costs and recovery. Alternative: full tax-exclusive fee with explicitly assigned cost bearer.
D2	Development recovery method	Separate configurable top-slice of N, capped to principal, then ordinary split. Record rate, funder, initial balance and end/termination terms.
D3	Operating costs and fee presentation	Deduct approved costs from course proceeds by default. Any learner price increase is separately priced and approved; never automatic.
D4	6% charge eligibility	Approved net third-party costs; specify treatment of processing/FX fees and internal labour. Business account keeps reimbursement and administration income before any later approved distribution.
D5	APGI internal distribution	50/50 Johan Ras / Jorrie Jordaan of ordinary distributable course earnings. Confirm whether any other APGI income should enter that pool.
D6	Owner authority	Company-only brand, certificate and assigned-policy access; own-company progress summaries proposed. Invitation/export authority requires an explicit additional grant.
D7	Attribution and ownership	Offering/order-specific seller and named rights beneficiary; no automatic perpetual first-invite commission. Confirm duration of the 10% owner royalty.
D8	Financial review	Both APGI signatories for every submitted cost/distribution allocation. Add the company owner where their contractual terms change. Define reminders and delegation rules.
D9	Settlement and tax	Confirm merchant/legal entity, bank recipients, countries, invoice/tax treatment, currencies, payout cycle, reserve and refunds before payment activation.
D10	Operating budget	Approve shared-cost method, caps, AWS idle costs, variance threshold and treatment of credits; confirm the APG/APGI business-account name.

Unresolved decisions: _____

_____

Agreed amendments / annex reference: _____

_____

Any company-specific rate that differs from these defaults needs its own approved schedule. No omission on this page means consent. A review signature does not itself authorise production deployment, a bank payout or an unreviewed course-rights transfer.

15 / REVIEW FRAMEWORK

Approval record and supporting references

Internal review copy for Johan Ras and Jorrie Jordaan. Company-specific schedules should expose only information relevant to the affected company.

Approver	Decision / signature / date
Johan Ras	Approve / Reject / Amend (circle one) Signature: _____ Date: _____
Jorrie Jordaan	Approve / Reject / Amend (circle one) Signature: _____ Date: _____
Affected company owner, where required	Company / authorised name: _____ Decision: _____ Signature / date: _____

Effective date after approval: _____
Approved commercial schedule / policy version: _____
Authority of company signatory verified by: _____
Release authorisation: Separate approval required after implementation QA.

Provider references checked on 15 October 2026

[S1] Stripe - Separate charges and transfers. Provider flow supports platform charges and transfers to multiple connected recipients; integration-specific behaviour must be confirmed before implementation.
docs.stripe.com/connect/separate-charges-and-transfers

[S2] Stripe - Cross-border payouts. Supported regions, funds flows and destination restrictions must be checked for the actual legal entities and payees.
docs.stripe.com/connect/cross-border-payouts

[S3] Stripe - Refund and cancel payments. Refund treatment can leave provider fees and balance obligations; do not assume a refund reverses every related transfer or cost.
docs.stripe.com/refunds

[S4] Supabase - Row Level Security. Database policies and grants form part of the organisation access boundary; server and file access also require authorisation.
supabase.com/docs/guides/database/postgres/row-level-security

Source and document control

Prepared from the user's requirements and read-only inspection of V2 organisation, branding, commerce, invitation and certificate components at the commit stated on page 2. No live financial records or private learner data were needed. Examples are illustrative, not tax advice, provider pricing or evidence of an existing payment agreement. The parties must confirm legal rights, accounting treatment and their final commercial terms.

After approval, file the exact approved PDF, commercial schedules and approval receipt in the future Platform policies register. Keep prior versions accessible to authorised reviewers and preserve the relationship between the approved rules and each transaction. Until that workflow is implemented, this local PDF is a review document only.
